

## Protect your most valuable teaching tool !

A teacher's voice is their most valuable teaching tool used on average 5 hours a day. It's a delicate instrument that deserves protection.

In today's modern classroom teachers compete against background noise including interactive whiteboards, computers, air conditioning, chatty students, moving furniture, echo and more.

### HOW DO YOU OVERCOME THESE DISTRACTIONS?

#### \* RAISE YOUR VOICE:

Raising your voice does little to improve the situation, but puts you under stress and strains your vocal cords.

#### \* IGNORE THE DISTRACTIONS:

Students who struggle to hear struggle to learn. For the Average child 45% of the school day involves listening activities.

#### \* IMPROVE CLASSROOM ACOUSTICS:

Frontrow Soundfield Systems allow you to speak in a normal conversational tone clearly reaching all areas of the classroom without straining your voice.

Teachers often strain to overcome

With a Soundfield System teachers can speak comfortably

More than just an amplification system, Precision Acoustics supply and install Frontrow Soundfield Systems designed specifically with the classroom in mind using digital algorithms making speech easier to understand and removing any issues with feedback. Choose from a range of systems including portable, single tower or multiple speaker systems.
