

# Precision Acoustics

Unmask your  
voice with  
FrontRow

call 08 9249 2907

## With Covid-19 an ongoing threat we need to adapt.

When wearing a mask our voice becomes muffled, what can we do as educators?

- Raise our voice
- Remove our mask
- Use the safe alternative

### No student left behind

Our lesson capture software records and uploads lesson audio and video so students unable to attend class can stay up to date with important curriculum content.

## • Raise our voice

**Not the best choice.** Even though this is often our immediate response, raising our voice for long periods as educators puts strain on our vocal cords. According to the National Education Association teachers are more than twice as likely as non-teachers to suffer from voice problems and three times as likely to see a doctor about the issue.

## • Remove our mask

**Not the safe choice.** Experts say upon speaking Covid-19 is released into the air, the more you project your voice the more it may spread. The virus can remain airborne for many hours in classrooms and people without any symptoms may be infected and still spread the virus.

## • Use a Juno

**The best choice!** With or without a mask you will be heard loud and clear, reduce strain to your vocal cords, and protect your audience from the risk of Covid-19.

Juno is easy to set up & use. The pendant microphone is unobtrusive, voice quality is outstanding and the speaker tower projects your voice evenly throughout the room.
