How's Your Voice?

The average Teacher uses their voice for nearly 1000hrs each year!

As a teacher your voice is your most important tool. It's a *delicate* instrument that needs protection.

Approaching the end of another year how is your voice?

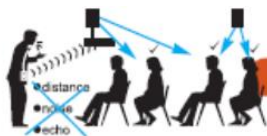

Many Teachers try to compensate against background noises and distractions by raising their voice, however this does little to improve the situation. Hoarseness, frustration, stress, general fatigue or even permanent voice strain are direct results of trying to fight classroom noise without assistance.

Teachers often strain to overcome:

In a typical classroom, the teachers voice declines dramatically over relatively short distances.

FrontRows Active Learning Systems will provide all the assistance you require. Continue speaking in your normal conversational tone and our small lightweight microphone will transmit your voice through a digitally controlled driver and the OptiVoice algorithm making your voice crisp, clear and easy to understand while preventing fatigue and voice strain each day.

With Active Learning System teachers can speak comfortably.

For more information or a free demonstration on how Soundfield systems can benefit you and your students contact Precision Acoustics.

PRO DIGITAL – Infrared receivers mean no channel management or interference. Multiple speaker locations for complete sound coverage.

In the classroom teachers often strain their voice to overcome noise from:

Interactive Whiteboards

COMPUTERS

Chatty Students

Air Conditioners

EXTERNAL NOISES

Moving Furniture

Distractions.....

JUNO System –

Digital technology means NO cables or wires. Easy to install or move.
